

POWER PACK & CUTTERHEAD PACKAGE · BUILT IN CONCORD, NC

TO EVERY SHINN POWER PACK & CUTTERHEAD OWNER

WE BUILT YOUR SHINN UNIT. AND WE STILL SUPPORT IT.

Shinn Systems got out of the game in 2024 — and they send their customers to us.

There's a reason for that. Ron McMurphy joined Shinn Systems in 1998 to design and prototype the original power pack, and he engineered the electrical controls and hydraulics on the Shinn line for the next 25 years. Every design change on the line was his work.

And from 2013 to 2024, every Shinn power pack and cutterhead was built in our shop in Concord, North Carolina. We hold the design specs for your exact unit — whatever year it was built, whatever's in it, we know it, because we put it there.

1998

Ron joins Shinn to design & prototype the original power pack

1999

Denison hydraulic system — designed and implemented by Ron

2005

Rexroth generation — Ron's design change

2009

Linde generation — Ron's design change

2013-24

Every Shinn unit manufactured at our Concord shop

2024

Shinn exits — and refers all customers to Powertek

FIVE WAYS TO KEEP YOUR INVESTMENT WORKING

YOUR UNIT HAS OPTIONS. ALL OF THEM ARE HERE.

1 Keep it running — service & repair **PER SCOPE**

Pump and motor rebuilds, hydraulics, controls. Quoted per scope, with a real lead time you can plan around. We have the design specs and parts knowledge nobody else has.

2 Make it new again — the full retrofit **QUOTED**

If the engine runs, we totally update the rest: a new 280-pump hydraulic system (or reman of your pump and motor) and a new control package with an all-digital panel — no more hydraulic gauges leaking in the cab, burned-out bulbs, or throttle-cable pump control. Powertek Connect included. Your existing cutterhead retrofitted to match.

3 Pack's good, excavator's worn out? Move it. **QUOTED**

Your power pack usually outlives the carrier under it. We pull it off the old excavator, install it on your newer one, and retrofit it in the same job — up and running with Powertek Connect, without buying a new power pack.

4 Full remanufacture **QUOTED**

Complete teardown, rebuilt to better-than-new condition. Fixed quote after inspection.

5 Ready for new? We're the successor line. **CALL FOR PRICING**

Powertek power packs, XPE excavators, and XPM cutterheads — 577+ HP, 200 GPM @ 5,000 PSI, 2-year warranty — built by the same hands that built your Shinn.

**INCLUDED WITH EVERY RETROFIT AND NEW BUILD**

Live machine data — temps, pressures, location, alarms — on your phone. And the engineering team in Concord that built your machine watching the same data, running remote diagnostics, and usually calling you before you'd call us.

Start with a free phone assessment — call 704-788-9054 with your serial number and hours. We'll tell you straight.
